NEW MAJOR: FALL 2016
UNT Bachelor of Science in PUBLIC HEALTH

The U.S. Centers for Disease Control has identified the need for new undergraduate programs in public health by the year 2020. At UNT, the BSPH degree will offer a contemporary public health core with a choice of two specialty tracks:

Population Studies
- Develop skills in the social sciences to implement and evaluate the impact of health programs and policies based on the knowledge, attitudes, beliefs and socioeconomic determinants of health that affect special populations (men, women, children, elderly, ethnic groups, etc.)

Biological Sciences
- Develop public health practitioners who are the link between the life sciences community and users of scientific information for the development, implementation, and evaluation of policies and programs affecting the public’s health.

Students may opt for further specialization by choosing an elective concentration:
- Administration
- Biological Sciences
- Emergency and Disaster Management
- Epidemiology
- Population Studies

WHY CHOOSE THIS DEGREE?
- Strengthens your application to Master’s of Public Health programs
- Dual-credit enrollment with UNT Health Science Center’s MPH program
- Strong job market in North Texas
- Careers in hospitals, health departments, nonprofit organizations and more
- Interdisciplinary experience across UNT colleges and departments
- Ideal for quantitative and socially oriented students
